

# ČSOB Flexibilní plán

Investing without emotions using market trends

Being invested in every market weather pays off in the long run. You never know when the skies clear out again after the storm, and if that day is not sunnier than ever. Through our ČSOB Flexibilní plán fund, you invest in world brands such as **Apple, Facebook, Google (Alphabet), Amazon, Louis Vuitton (LVMH), Mercedes-Benz (Daimler), Royal Dutch Shell, ING, Allianz or Johnson & Johnson.**

## Why to invest here?

- The fund combines investing using a computer that never sleeps and does not make emotional decisions.
- The fund adapts rapidly to the current financial market situation and, according to developments, forms an **optimal mix of shares and bonds.**
- Thanks to managing the **currency risk** you do not need to worry about the CZK exchange rate changes.

Tip: Invest regularly from CZK 500 per month.

## What do you invest in?

- The fund has two parts– fixed part and the variable part. The fixed part contains a stable share of bonds (77.5%) and shares (22.5%), the variable part is managed by the mathematical model, according to the current situation.
- If one component is more profitable, its share in the add-on component automatically increases. Therefore, if shares are better performing than bonds, the fund invests more in shares, and vice versa.
- The ratio between the fixed and the variable part may change continuously. However, total amount of equity in the portfolio never exceeds 65%.

**!** Before investing we recommend to get familiar with risks on page 2 in section What you should know.

## How to start?

In order to start investing, it is sufficient to sign a contract with us at the branch. Then you can use our consultancy or the ČSOB Investice portal.

## When you can withdraw money?

You can withdraw money from the fund at any given business day at the current market value. You will have the paid up amount on your account within five business days, and you will not pay any fees.

*“A quick, flexible response can mean the difference between success and failure, in investments between profit and loss.”*

**Václav Lepič**, product and investment strategy manager, has more than 20 years of experience in investment and financial markets.

## Who is the fund for?

The fund is for clients with an investment profile:

**Defensive and higher**

### You do not know what it means?

This type of client emphasizes the balance between the return potential and the volatility of the investment value. He expects a return typically exceeding the return on ordinary bank deposits.

**Product score:** Allows the comparison of the savings and investment products from the ČSOB/KBC Group in terms of risk. It takes into account amongst others the volatility of the investment.

If you are using portfolio investment advisory, ask your investment adviser to evaluate whether this product is suitable for you.

### Synthetic risk and return indicator (SRRI) **3** on the scale from 1 to 7

It is based on legislation and allows for the comparison of collective investment funds in the market. It shows the historical variability of the fund value and hence the riskiness of the investment, but it has a limited use to estimate the risk in the future.

## Fees

Fund entry fee	<b>1.5% from invested amount</b>
Fund exit fee	<b>0% from withdrawn amount</b>

## Parameters

Type	<b>Mixed fund</b>
ISIN	<b>BE6277441869</b>
Minimum investment	CZK 5,000 one time or from CZK 500 regularly
Currency	Czech crown (CZK)

## What you should know

The value of the investment may fluctuate over time; the return on the invested amount is not guaranteed.

### Significant risks of this fund comprise:

- Market risk, which consists in the possibility of unfavorable development of asset prices in the fund portfolio.
- Credit risk comprises a situation where the issuer or the counterparty – most often the issuer of a bond – fails to fulfill its obligation.
- The risk of inflation means the risk of depreciation of the purchasing power of an asset by rising prices of goods and services in the economy.
- Revenue risk; due to the way the fund works, transaction costs may have a significant effect on return (for example, in a situation similar to that of the equity component and the fixed return component). These costs are paid by the fund and are not included in the above fees.

The fund may invest in investment securities, money market instruments, securities or book-entry securities issued by the collective investment fund, deposits, financial derivatives, liquid assets and other instruments.

## Basic characteristics

### POSSIBLE RETURN
